## INTERNATIONAL PRELIMINARY EXAMINATION REPORT

International application No.

PCT/R 03/02451

## V. Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

## 1. Statement

Novelty (N)	Claims	1 - 8	YES
	Claims		NO
Inventive step (IS)	Claims	1 - 8	YES
	Claims		NO
Industrial applicability (IA)	Claims	1 - 8	YES
	Claims		NO

## 2. Citations and explanations

Novelty (PCT Article 33(2))

Claim 1 is novel over the prior art cited in the international search report due to the following combination:

a functional silver layer,  
a sacrificial layer consisting of Ti or an alloy of Ti and Zn and/or Al and containing chemically bonded hydrogen,  
a layer of ZnO possibly doped with Al and/or In next to the sacrificial layer.

Inventive step (PCT Article 33(3))

Document US-A-4749397 (D1), which is considered the closest prior art, describes (cf. column 2, lines 24-33 and column 5, lines 8-12) a system of layers from which the system that is the subject matter of claim 1 differs in that the sacrificial Ti layer does not contain chemically bonded hydrogen.

The technical effect of this difference is to protect the silver layer from oxidation.

The problem is therefore to obtain systems of layers having weaker emissivity and able to undergo the preload stage of glazing.

No indication in D1 or any other document currently suggests adding hydrogen to the sacrificial layer.

The solution defined in claim 1 therefore involves an inventive step.

Industrial applicability (PCT Article 33(4))

Such systems of layers are used on glass substrates for architectural glazing.
